

TaskIt — Prototype Pack

Prototype Documentation

Group 3 - Team 2

November 8, 2025

Team Portfolio: <https://akr-sed.github.io/team-portfolioio-project/>

Cover and Summary (1/2)

Project Name

TaskIt — *Simple Task & Project Management*

Purpose of the Prototype

Demonstrate and validate core flows for simple, effective task and project management: registration/login, project creation and member invites, task creation/assignment/status, and progress visibility via dashboard.

Overview of Flows Included

- ➊ **Register / Login** — Account creation and email verification
- ➋ **Create Project & Invite Member** — Project setup and team collaboration
- ➌ **Invite Flow** — Send and accept invitations
- ➍ **Create & Assign Task** — Task creation with Kanban board visualization

Cover and Summary (2/2)

Reviewer Expectations

This prototype focuses on end-to-end usability of critical user journeys, not full feature depth. All screenshots are from the working prototype.

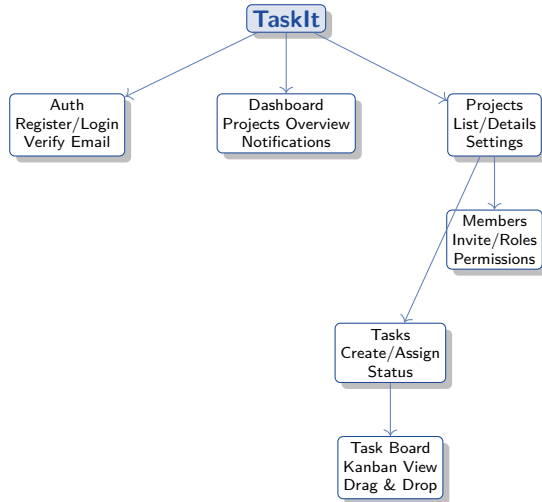

Targeted Users

- **Students** managing coursework and group projects
- **Small teams** (freelancers, clubs, startups) needing lightweight planning
- **Operational groups** seeking minimal configuration and fast onboarding

Key Design Principles

Simplicity ▪ Clear visibility ▪ Fast onboarding ▪ Real-time collaboration

Information Architecture — Sitemap

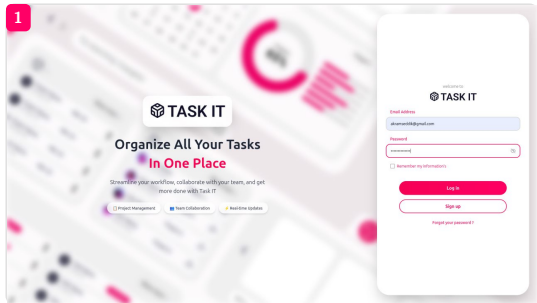

Main sections and their relationships — showcasing core navigation

Wireflow — Scenario 1: Register / Login (1/2)

Goal: New user creates account and reaches Dashboard

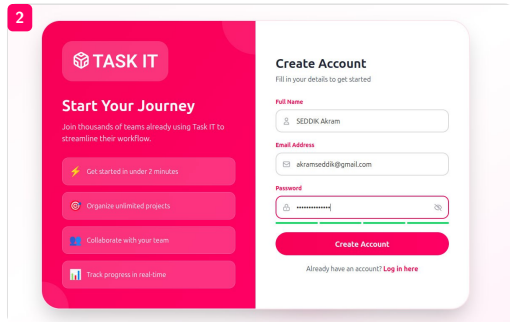

Pre: None

Post: Authenticated on Dashboard

Step 1: Landing page

→ User clicks "Sign up" to begin

Step 2: Registration form

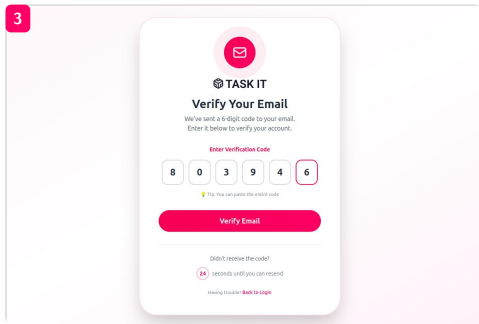

→ Enter name, email, password

Wireflow — Scenario 1: Register / Login (2/2)

Goal: New user creates account and reaches Dashboard

Pre: None

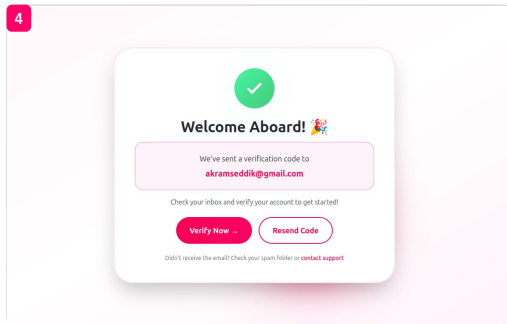

Post: Authenticated on Dashboard

Step 3: Email verification

→ Enter 6-digit code sent to email

Note: Email verification ensures account ownership and reduces spam

Step 4: Verification success

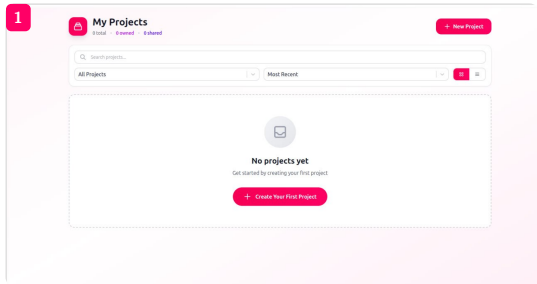

→ "Welcome Aboard!" ready to start

Wireflow — Scenario 2: Create Project (1/2)

Goal: Owner creates project and invites collaborator

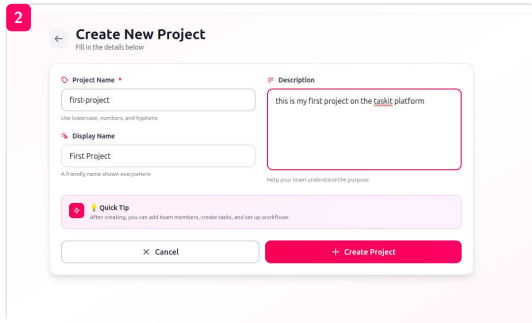

Pre: User logged in

Post: Project exists; member invited

Step 1: Empty project list

→ Click "Create Your First Project"

Step 2: Project creation form

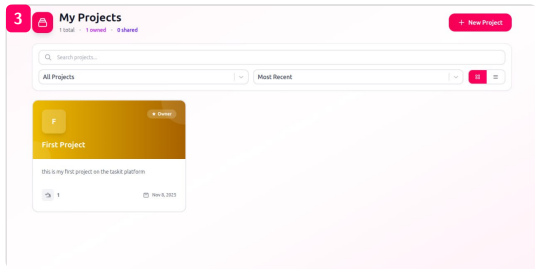

→ Fill name, display name & description

Wireflow — Scenario 2: Create Project (2/2)

Goal: Owner creates project and invites collaborator

Pre: User logged in

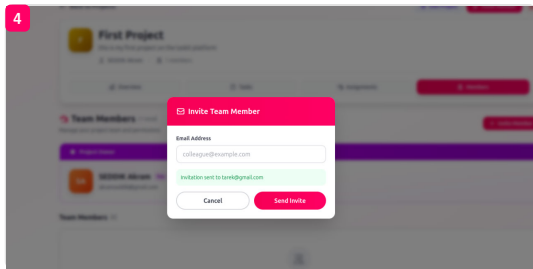

Post: Project exists; member invited

Step 3: Project created

→ Visible in "My Projects"

Note: Projects created in under 30 seconds with guided placeholders

Step 4: Invitation notification

→ Pending invites in notification panel

Wireflow — Scenario 3: Invite Member (1/2)

Goal: Project owner sends invitation to team member

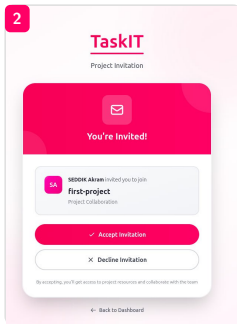

Pre: Project exists

Post: Member invited and notified

Step 1: Invite modal

→ Enter collaborator email address

Step 2: Invitation received

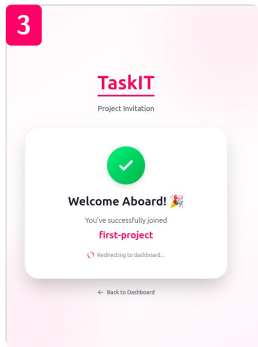

→ Invitee sees project & sender info

Wireflow — Scenario 3: Invite Member (2/2)

Goal: Project owner sends invitation to team member

Pre: Project exists

Post: Member invited and notified

Step 3: Invitation accepted — "Welcome Aboard!"

→ Member redirected to project dashboard with full access

Wireflow — Scenario 4: Create & Assign Task (1/2)

Goal: Admin creates task, assigns to member, sets due date

Pre: Project exists

Post: Task visible on board

1

+ Create New Task
Add a new task to your project.

Task Title *
Create database Design

Description
you should create the database design and skeleton to start implementing the models

Activity Type
Backend

Priority
Low

Assign To
Larsk

Cancel **Create Task**

Step 1: Task creation modal

→ Fill title, description, assignee

2

Create database Design
BACKEND

you should create the database design and skeleton to start implementing the models

View >

Step 2: Task created

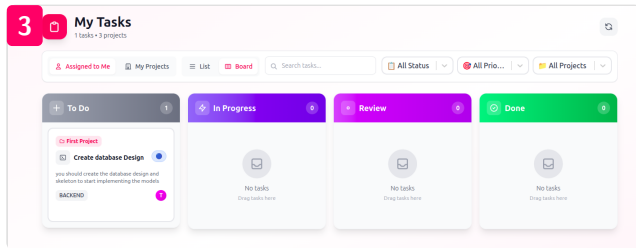

→ Appears in list with all metadata

Wireflow — Scenario 4: Create & Assign Task (2/2)

Goal: Admin creates task, assigns to member, sets due date

Pre: Project exists

Post: Task visible on board

Step 3: Kanban board — task in "To Do" column

→ Drag tasks: To Do → In Progress → Review → Done

Note: Real-time updates ensure all team members see current status instantly

Usability Test Plan and Findings

Test Plan

Participants: 6 team members

Environment: In-person sessions

Protocol: 5 min intro ■ 15–20 min tasks ■ 5 min feedback

Task	Target
Register/Login	≤ 3 min; 5/6
Create Project	≤ 4 min; 5/6
Invite Member	≤ 3 min; 6/6
Create Task	≤ 4 min; 5/6

Key Findings

Highlights

- Email verification clear & quick
- Project creation intuitive
- Kanban instant visual feedback

Top Issues

- Invite button not obvious
- Task assignee label needs work

Next Steps →

- Add icon/tooltip for invite
- Improve assignee field labeling
